SUMMARY

A curious and disciplined BCA graduate (CGPA 7.5+) who learns best by building real things — five full-stack and frontend projects shipped end-to-end over the past year, including a MERN-based Visitor Pass Management System and a VectorShift technical assessment involving node-based UI architecture and backend integration. I care about writing clean code and creating interfaces that feel intuitive, not just functional, and Seeking an entry-level Software Engineer or Frontend Developer role where I can Contribute, learning fast and build scalable web applications.

EDUCATION

Mahatma Gandhi Kashi Vidyapith (MGKVP)

Bachelor of Computer Applications (BCA) | (CGPA: 7.5)

Varanasi, UP

2023 – 2026

PROJECTS

Visitor Pass Management System | MongoDB, Express.js, React, Node.js

Apr 2026 – May 2026

- Engineered a full-stack MERN application enabling secure visitor authentication, entry logging, and automated digital pass generation
- Reduced manual front-desk effort by digitizing visitor records and streamlining the entry workflow

Real-Time Quiz App | HTML, CSS, JavaScript

March 2026

- Developed a responsive quiz application in vanilla JavaScript with a live timer, automatic score tracking, and dynamic question rendering
- Built a mobile-first, responsive UI using CSS media queries, and refined the scoring flow based on feedback from peer testing

Movies | OTT Platform | React.js, OMDb API, Tailwind CSS

July 2026

- Architected a movie browsing platform using the TMDb API to fetch and display real-time movie data, with search and filtering by genre
- Crafted a responsive, card-based UI for smooth browsing across devices

AI-Powered Expense Tracker Analysis | React.js, JavaScript, Local Storage

June 2026 – July 2026

- Created an expense-tracking application with category-wise budgeting and interactive data visualization to help users analyze spending patterns
- Integrated persistent Local Storage so users retain data across sessions without a backend

VECTORSHIFT — FRONTEND TECHNICAL ASSESSMENT

React.js, JavaScript, Python (FastAPI)

March 2026

- Built a reusable node abstraction system in React to standardize creation and styling across a visual, drag-and-drop pipeline builder, and implemented dynamic text nodes with variable parsing (e.g., {{ variable }})
- Integrated the frontend with a Python/FastAPI backend to validate pipeline structure as a Directed Acyclic Graph (DAG), completed as part of a real company's technical interview process

TECHNICAL SKILLS

Languages: C, C++, JavaScript

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, React Hooks (useState, useEffect), Tailwind CSS

Backend & Database: Node.js, Express.js, MongoDB, REST APIs, Axios / Fetch API

Developer Tools: Git, GitHub, VS Code, Netlify

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (Basics)

SOFT SKILLS

Problem Solving, Communication Skills, Team Collaboration (peer feedback & testing), Time Management, Quick Learning, Adaptability

CERTIFICATIONS & ADDITIONAL INFO

MERN Stack Development – Tutedude | TCS iON (iCAT)

6+ public repositories on GitHub showcasing continuous hands-on practice.
